TECHNIQUE TIP FOR USE OF:
DE-IMPACTING SPRING WITH UPRIGHTING TUBE

1. Place a SEP™ De-Impaction Spring mesial to the tooth being uprighted.
2. Insert a full or segmental arch extending into the uprighting tube.
3. For an extra “boost”, place a segment of Stop Wound Open Coil Distalizing Spring on the archwire mesial to tooth being uprighted.
4. If necessary, place a crimpable stop distal to the first molar tube.

RESULTS ACHIEVED IN 4 WEEKS!
